

Category Longtexts Documentation

Functional overview, usage and technical notes for shop owners and developers.

Category Longtexts

Version 2.0.0 | English

License and Legal Notice

This software, the related documentation and all delivered components are owned by Netensio GmbH.

Use is permitted only if an official license for this specific extension has been acquired directly from Netensio GmbH.

Redistribution, copying, decompilation, publication or use outside the licensed environment is prohibited without written approval from Netensio GmbH.

License required

Install and operate the extension only with a valid Netensio license. Keep purchase and license records for support and audit cases.

Operations and Troubleshooting	7

Overview

The extension adds three independently editable longtext areas to category and manufacturer pages. Each text can be positioned independently and can use its own background colour.

Module id

net_admin_max_text

Composer package

netensio/net_admin_max_text

Version

2.0.0

OXID branches

OXID eShop 6.5 and OXID eShop 7.0-7.4

Storefront

Smarty for OXID 6, Twig/default theme extension for OXID 7

License File for Encoded Extensions

SourceGuardian and ionCube encoded Netensio extensions require a matching license file for the licensed domain in addition to the purchased license.

- After purchase, generate and download the license file for the licensed domain in the Netensio customer account at www.netensio.de.
- Place the file unchanged and without renaming it in the extension directory `extensions/net_admin_max_text`.
- Extensions licensed under an open source license do not require a license file, and no license file is provided for that license type.
- Additional domains can be licensed with reduced-price add-on licenses.

For shop owners

- Additional content areas for SEO, advisory or campaign copy on category and manufacturer pages.
- Three separate text areas A, B and C per category and manufacturer.
- Positioning through module settings: before/after sidebar or before/after footer.
- Background colours per position group as hexadecimal colour values.

Administration Usage

After activation new tabs appear in two areas of the OXID administration.

Categories

Artikel verwalten > Kategorien > Langtext A, Langtext B, Langtext C

Manufacturers

Stammdaten > Hersteller > Langtext A, Langtext B, Langtext C

Save

The selected language is respected by the editor and saved to the translated OXID field.

Module settings

sNetMaxTextA

Position of longtext A

sNetMaxTextB

Position of longtext B

sNetMaxTextC

Position of longtext C

sNetMaxTextSbPre_bg

Background colour before sidebar

sNetMaxTextSbApp_bg

Background colour after sidebar

sNetMaxTextFtPre_bg

Background colour before footer

sNetMaxTextFtApp_bg

Background colour after footer

Apex / OXID 7

Apex does not provide sidebar output on every category and manufacturer page. For OXID 7 prefer `footer_prepend` or `footer_append` when the output must be reliably visible.

Technical Details

Data model

On activation the extension adds three text fields including translation fields to both `oxcategories` and `oxmanufacturers`.

```
oxcategories:    netmaxtexta, netmaxtextb, netmaxtextc
oxmanufacturers: netmaxtexta, netmaxtextb, netmaxtextc
translations:    *_1, *_2, *_3
```

OXID 7 structure

`src/Core/Events.php`

Activation, database fields, cache clearing

`src/Core/ViewConfig.php`

Module setting access and HTML entity decoding

`src/Model/Manufacturer.php`

Root object longtext field initialization

`src/Controller/Admin/*`

Admin editors for category and manufacturer longtexts

`views/twig/extensions/themes/default`

Apex/default storefront integration

Templates

OXID 6 uses Smarty blocks. OXID 7 provides Twig extensions and Smarty fallbacks for admin templates. Positions are read only from module settings.

Operations and Troubleshooting

- If new content is not visible: clear cache, activate the module and verify that the target page is a category or manufacturer page.
- If sidebar positions are missing in Apex: switch the text position to `footer_prepend` or `footer_append`.
- If fields are missing: activate the module again and verify database privileges for `ALTER TABLE`.
- For Enterprise shops use the correct `shop-id` in activation commands.

Quality assurance

The port includes unit tests for all extension methods. The Docker test matrix covers OXID 6.5 and OXID 7.0 through 7.4.
